\*Huszár, Géza. Sur une méthode nouvelle d'interpolation. Comptes Rendus du Premier Congrès des Mathématiciens Hongrois, 27 Août-2 Septembre 1950, pp. 727-730. Akadémiai Kiadó, Budapest, 1952. (Hungarian. Russian and French summaries)

If  $L(y_i)$  is Lagrange's interpolation formula for a function whose values at the points  $x_i$  are  $y_i$ , the author's interpolation formula may be written  $[L(y, m+n)/L(y, n)]^{1/n}$ . The author states that in many cases an adroit choice of the exponents  $m$  and  $n$  results in a tremendous accuracy.

TITLE: Calculation of the forces on the commutator riser

SOURCE: Academia scientiarum hungaricae. Acta technica, v. 51, no.1-2, 1965, 149-161

TOPIC TAGS: electric motor, quality control

ABSTRACT: Methods for calculating the forces on the commutator riser in electrical motors were developed with the aim of establishing procedures for more precise quality control in manufacture. The mechanical load characteristics are governed mainly by design and assembling parameters, by the power effects developing during rotation, and by the effects of warming-up during start-up. The method consists of calculating the forces independently and then superimposing them in an appropriate manner. The approximate results obtained with the aid of this technique may be used for designing purposes. Orig. art. has: 8 figures and 2 formulas. [Orig. art. in Eng.] [JPRS: 33,544]

"Oxidation Methods in Organic Analysis. Part I: Determination of Phenylhydrazine in the Presence of Aniline"

Budapest, Acta Chimica Academiae Scientiarum Hungaricae, Vol 47, No 2, 1966, pp 115-120.

Abstract: [English article] The method is based on the fact that phenylhydrazine is quantitatively oxidized by KBr in HCl solution to a diazonium salt, and that this reaction is not affected by the presence of aniline in the system. The end-point of the reaction is indicated by the discoloration of a starch-iodine solution through the formation of excess potassium bromide. The method described has an accuracy of  $\pm 0.3\%$ . The determination is adversely affected in the presence of hydrazine, hydroxylamine, or other reducing agents. Orig. art. has: 1 figure, 6 formulas and 2 tables.

Title : On a Rigid Radiating Ring Placed in an Infinite Reflecting Screen

Orig Pub : Acta techn. Acad. scient. hung., 1959, 25, No 1-2, 119-157

Abstract : The author considers the problem of the radiation of a rigid ring, placed in an infinite reflecting screen, with allowance for the width of the ring. An exact solution is given for the pressure on the symmetry axis of the radiator and in the plane of the screen. It is shown that the results of the approximate calculation, performed under the assumption that the ring widths is

small compared with the wavelength and with external radius of the ring  $r$ , deviate considerably from the exact equations in the case when  $\alpha = s/r > 0.5$ , and  $kr > 1$ , where  $k$  is the wave number. This deviation increases with increasing  $kr$ . It is shown that the boundaries of the near field, which has a character of a standing wave, depend on the width of the rings; with increasing width of the ring, the boundaries of the near field are reduced. Starting with the exact solution, the radiation impedance is calculated, and the reactive component of this resistance can be quite large at certain values of  $kr$ . The action of the ring radiator is compared with the action of a rigid radiating disk of the same radius. Limiting cases of an infinitely narrow ring and a solid disk are considered; it is shown that in the limiting cases the exact solution goes over into the known forms for these cases. The exact

Kerkay, Andorné

TITLE: A method of preparing anisotropic permanent magnets  
from barium ferrite

PERIODICAL: Referativnyy zhurnal, Elektrotehnika i energetika,  
no. 24, 1962, 4, abstract 24 B 29 P. (Hung. pat.  
no. 148045, February 15, 1961)

TEXT: The blank of  $\text{BaO} \cdot 6\text{Fe}_2\text{O}_3$  is heat-treated in granular  
form with a mean particle size greater than 6 microns, the fraction  
of 6 - 12 microns size being less than 50% by weight. The powder  
is shaken in a periodically varying but unidirectional magnetic  
field not exceeding 500 Oe. After pressing in a magnetic field of  
the same direction and magnitude, the blank is demagnetised in a  
decreasing alternating field and heat-treated. Sintering is  
carried out at 1300-1350 °C for more than one hour, with subsequent  
heat-treatment for 3 - 15 hours at 600-1000 °C. ✓

TITLE: Wave propagation in viscoelastic rods

SOURCE: Conference on Acoustics of Solid Media. Warsaw, 1964. Proceedings.  
Warsaw, PWN, 1966, 57-66

TOPIC TAGS: wave propagation, oscillation, elastic oscillation, longitudinal  
oscillation, viscoelastic rod, elastic rod/Love's differential equation

ABSTRACT: Longitudinal oscillation in infinitely long, linearly viscoelastic rods  
was discussed on the basis of Love's differential equation for elastic rods, and it  
was found that a usable approximation of wave propagation values in viscoelastic  
rods can be obtained if their lateral dimensions are smaller than wavelengths.  
The effects of rod diameter variation can be investigated using a hypothetical  
frequency-dependent rod modulus. Orig. art. has: 6 figures and 4 formulas.

"The Question of Supplying Vitamin in the Form of Ascorbic Acid to Soldiers."

Prague, Vojenske Zdravotnicke Listy, Vol 35, No 4, Aug 66, pp 158 - 162

Abstract [Authors' English summary modified]: Soldiers suffered from a large seasonal deficiency of vitamin C in the part of the army in which an investigation was made. 100 mg per day was administered daily for a period of 3 months to a group of soldiers; this group had a serum level of 0.5 mg% against 0.21-0.29 mg % found in the control group. In a group which received 600 mg of ascorbic acid once a week for 3 weeks the level was kept at 0.7 mg%. Such rapid administration should be made only when the normal supply (100 mg daily) cannot be administered. 3 Figures, 3 Tables, 4 Western, 10 Czech, 4 Russian, 1 Egyptian reference.

In a male aged 48, with cor pulmonale tracheography revealed a stricture at the  
level of the jugulum. Tracheo-bronchoscopy confirmed this finding and in addition  
there was noticed a rigidity of the tracheal wall caused by rough calcified hard  
plaques bulging into the tracheal lumen and not removable for biopsy.
